I will create a comprehensive, modern web application for a fictional bank called "Nexus Global Bank." This application will include a sleek landing page, a functional dashboard for managing accounts, transaction history, and a simulated customer portal with a premium, dark-themed UI.

Nexus Global Bank Application
Apr 18, 8:28 AM
Try again without Canvas

Key Features of Nexus Bank:

1. **Modern Glassmorphism UI**: Uses a high-contrast dark theme with blur effects and gradients for a premium fintech feel.
2. **Interactive Navigation**: Smoothly transitions between the Landing Page, Secure Login, and Customer Dashboard.
3. **Dynamic Dashboard**:
    - **Asset Overview**: Large, high-impact balance display.
    - **Live Transactions**: A list of simulated recent expenditures and income with categorization.
    - **Visual Statistics**: Mock charts representing weekly spending and ROI.
    - **Vault Goals**: Progress bars for specific savings targets (e.g., Tesla, Travel).
    - **Quick Transfer**: A simplified peer-to-peer transfer interface.
4. **Responsive Design**: The application uses Tailwind CSS to ensure it looks great on mobile, tablet, and desktop.
5. **Secure Aesthetic**: Focuses on "Vault" and "Global" terminology to emphasize security and reliability.

You can navigate to the **Login** or **Open Account** buttons to see the different states of the application.
